

Pitching a Ridge Tent

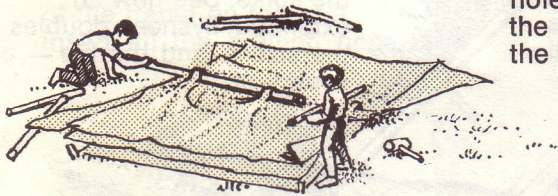

1. Lay out the groundsheet and put in pegs for the corner beackets.

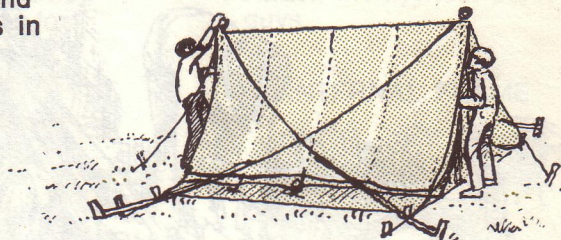

3. Place the spikes (on the upright poles) through the holes in the ridge pole, and the corresponding holes in the ridge of the tent.

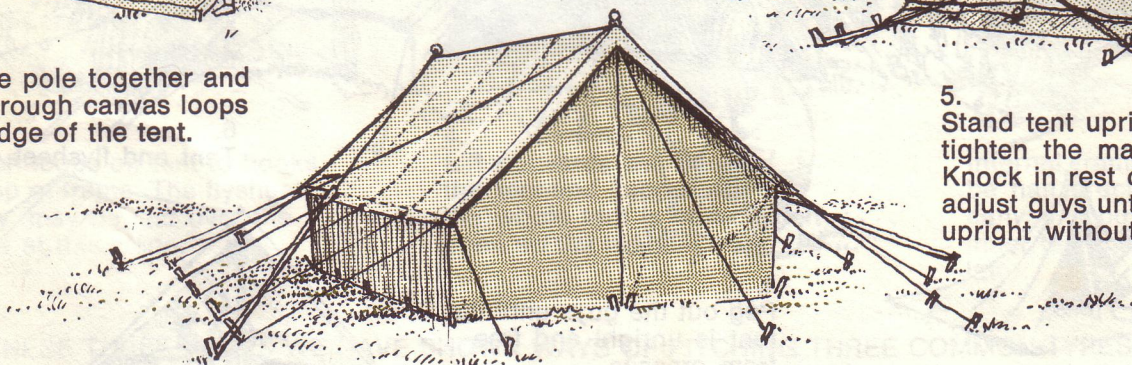

4. Attach corner guys and main guys to their pegs and put dollies of main guys over spikes of upright poles.

2. Put ridge pole together and insert through canvas loops in the ridge of the tent.

5. Stand tent upright and tighten the main guys. Knock in rest of pegs and adjust guys until tent stands upright without creases.

PRACTISE ERECTING YOUR TENT WELL BEFORE YOU GO TO CAMP.
